

EGO BLAST INSTALLATION IN SERVER ROOM

LEM Industries in Tuscany (Italy) is a world-leading producer of galvanic details for the fashion brands such as Gucci, Valentino, Louis Vuitton and others. Over the years, they have been hit by devastating fires, which has resulted in three out of five factories burning to the ground. Together with MAUS's Italian distributor Tecnosol, MAUS was tasked with protecting the entire plant. With the EGO Blast series we have secured their server rooms with smoke detectors from Swedish Ateco. The EGO system is portable and can be easily adapted to the size of the space without changing the rooms infrastructure.

Two EGO Blast 150 units protects a space of 30 m³.

If there are two units you can use two different kinds of activation methods. Smoke detector and manual activation.
